New ZetaTalk

Earth Changes

Announcements

Signs of the Times

Icon Just announced on April 18, 2012, an elitist group (from NASA, Microsoft, Google, Hollywood, and the politically powerful) is planning to mine minerals from asteroids. What are they *really* up to? Per the Zetas, the elite have long planned to escape to Mars or the Moon to avoid the immediate trauma of the Pole Shift, returning to Earth as kings when the dust settles.

ZetaTalk Prediction1/15/1999: *From its inception, NASA was attempting to secure, as much as anything, an escape from the forthcoming cataclysms. This escape route would be for the elite of not only the US government and US military but other elites around the world. This is well disguised in talk about science research in the skies and exploring the universe, but this is all to camouflage the real plans. They hope to watch the show from a distance. Watch the Earth, poor thing, lurch about. After a year or so has passed, when they can see that things have settled down, they'll come back down. They'll zoom around, taking their time deciding just where to land, and will land where there seems to be some good agriculture, some settlements, and emerge as kings. This is their plan, but none of this will happen. They won't succeed, but we don't expect them to give up.*

Icon An alternate plan was to nuke Planet X, forming a new Asteroid Belt but avoiding the passage and consequent Pole Shift, but that likewise failed.

ZetaTalk Expose9/23/2003: *On this day the US Government is planning to push Planet X away from its Point of Passage with Earth, changing its orbit such that it is diverted in its path to an increased retrograde orbit, which would take Planet X more quickly in a clockwise direction, averse to Earth's counterclockwise orbit direction, thus avoiding what is termed a collision of sorts, a pole shift, a collision of magnetic fields in which the Earth would unquestionably be the loser. The much*

publicized death of Galileo, sending it into Jupiter with its spent payload of Plutonium 238, will be the cover for success in this regard, any flash of light, or shock wave, being explained to the public as a reaction to the death of Galileo.

This had been debated with a representative from Space Guard on the sci.astro debates in 2001, wherein the Zetas explained why trying to [push an asteroid](#) into a new path or trying to [disintegrate it with nukes](#) would not work. The arrogant Space Guard and arrogant NASA, full of themselves, of course did not listen.

Dear Sir or Madam, Spaceguard UK is the largest independent organisation in the world concerned with the NEO impact hazard. We have taken the subject to both houses of Parliament in the UK, and secured the establishment of the government Task Force that you will be aware of. The quarterly edition of "Impact", our magazine is due, and I would like to include an item on the article that you have published. I would be grateful if you could comment on the notes below. Thanks for your time, and I will take a nil response as acquiescence to publish the item as it stands.

*Yours J Tate,
DirectorSpaceguard UK*

Nuclear explosions on the Earth's surface are an irresistible force meeting an immovable object - the Earth! Where the explosion can expand up or outward into the atmosphere there is only air turbulence. The portion of the explosion that is on the land side, or in the case of an underground explosion is encapsulated, is between a rock and a hot expanding place. The explosion is forced into the rock strata by the continuously expanding center of the explosion. Solid rock vaporized by nuclear explosions on the Earth's surface does not equate to the damage that would be done by one or even many nuclear devices on the surface of an asteroid. All parts of the explosion move rapidly out into space, and thus the asteroid is safely away before the nuke really gets going. A firecracker. A gnat. A sneeze. And the asteroid proceeds on its way, having only momentarily stepped aside to avoid mankind's silly experiment.

IconThe elite's plan to go underground into bunkers has also proved less than satisfactory. The shifting rock layers crush such bunkers, twist doors and elevators, and emissions of radon and methane gasses prove deadly.

ZetaTalk Description2/23/2002: *Given the size of the quakes, Richter 9 force worldwide, with mountain building and renting of continental rifts, these underground facilities will hardly be a safe place. It takes little to trap an outlet, torque an elevator such that it cannot rise or fall, and create panic in the tomb. Air circulation will not work, slowly smothering those trapped inside. Water will find its way into underground pockets, drowning those trapped. Electrical equipment will falter, plunging those into darkness.*

IconIn case escape did not prove possible, and in any case to save mankind's infrastructure so rebuilding the empires of the elite happens quickly after the Pole Shift, yet another plan was to shield the Earth from the debris in the tail of Planet X. This has likewise not made progress, but not for lack of trying. Under the guise of mining asteroids for minerals, the elite are trying yet again to bat aside any large debris heading toward Earth from the wafting tail of Planet X.

Is James Cameron Launching an Asteroid Mining Company?

April 18, 2012

<http://news.yahoo.com/blogs/sideshow/james-cameron-launching-asteroid-mining-company-204737338.html>

A new company called Planetary Resources held its official launch today promising a new venture that would merge "space exploration and natural resources," while adding "trillions" of dollars to the global GDP. The company counts some heavy-hitters amongst its founders and financial backers, including filmmaker/explorer James Cameron, Google co-founders Larry Page and Eric Schmidt, Ross Perot Jr. Charles Simonyi, formerly of Microsoft. The group's somewhat vague press release has the site Technology Review thinking the new company's goal "sounds like asteroid mining."

ZetaTalk Expose4/21/2012: *What are they up to? Certainly the expense of a space flight would not be justified by a mining effort. Deflecting debris during the onslaught anticipated from the tail of Planet X is exactly what this crew is about. When it is clear that the government cannot or will not provide the protection the wealthy think is their due, then they ponder taking matters into their own hands. Brandson's Virgin Galactic has put into place an escape into space, but as the reality of the debris in the tail of Planet X has emerged in the form of fireballs and large debris visible to even the common man with a mere floppy disc insert, fear has gripped the tender bellies of the wealthy elite. But one thing is clear. The wealthy*

elite are in the know about the inbound Planet X threat, and you, the common man, are being denied this information.

Do's and Don't

Check out this lively and highly entertaining [Video Clip](#) based on my [Help!](#) page, on the steps to take when first getting serious about the pending Pole Shift.

Worldwide Continental Twists

As with those [torn internet cables](#) that anchored at Kenya and in the Red Sea, Tanzania is being stretched as Africa rolls. The roll is stretching Tanzania and flooding results due to being pulled down during stretching. The roll is also crunching Namibia as the southern portion of the African continent is pulled to the west, so that aquifers at the center of the bend are under pressure and spewing water upward.

IMAGE: [Africa Twist](#)

Rising Tides Threaten Tanzania's Coastal Towns

March 23, 2012

<http://www.trust.org/alertnet/news/rising-tides-threaten-tanzanias-coastal-towns>

Surging Indian Ocean tides have forced hundreds of people in northeast Tanzania's Pangani District to abandon their homes, as higher seas increasingly threaten settlements along East Africa's coastline. Several towns and villages are suffering flooding and intrusions of salt water, which are damaging property and tainting clean water supplies.

Mystery Floods in Namibia

April 2, 2012

http://www.southerntimesafrica.com/news_article.php?id=6933

Floodwaters, suspected to be coming from underground lakes, have destroyed huge sections of roads between Tsumeb and Oshivelo in northern Namibia and ravaged some five farms in the area. The waters suddenly appeared around February 25. We were astonished to discover that some of this water was coming from underground and it wasn't rain water as we thought.

In Kazakstan, in Karaganda, a [five story building collapsed](#) for no apparent reason. This is near Belova, where booms recently occurred. In Moscow, also in the stretch zone, another [unexplained building collapse](#).

IMAGE: [Eurasian Collapse](#)

IMAGE: [Belova Location](#)

5 Story Building Collapse in Karaganda

April 9, 2012

<http://en.tengrinews.kz/emergencies/8960/>

Before the collapse the building was tilting to one side for several days. Starting with a small crack the inadmissible deviation of the building's corners reached 720 mm between April 1 and April 5.

One Dead, 11 Injured in Moscow Building Collapse

April 17, 2012

<http://en.rian.ru/russia/20120417/172865044.html>

The building was under construction and at least 16 people worked at the site when it collapsed covering an area of 500 sq. meters with rubble. Moscow authorities are investigating the accident and trying to establish the cause of the collapse.

Per the Zetas, the Eurasian Plate is pulling apart, and will eventually result in [a new Seaway](#) running up between Iran and Pakistan.

IMAGE: [Eurasian Seaway](#)

ZetaTalk Explanation2/18/2012: *Stretch zone tears are normally silent, though the roaring and singing Earth has lately given them a voice. When rock tears apart there is humming and an occasional boom, but the movement does not usually have enough violence to throw furniture. Belovo Prokopevsk, Novokuznetsk, and Kemerovo are in lowlands, in a region skirting the foothills of the Himalayas, not far from the path we have described for the new Eurasian Seaway. This region has many rivers, indicative of thin rock easily pulled apart.*

In India, which is being steadily pushed down and shoved under the Himalayas, a factory creaked and finally collapse in the middle of the night, killing many. Jalandhar is just below the Himalayas, and as such is being pushed down and *under*the

Himalayas, destabilizing the ground there.

IMAGE: [Jalandhar Collapse](#)

Factory Collapse Kills 5 in Northern India

April 16, 2012

<http://www.nytimes.com/aponline/2012/04/16/world/asia/ap-as-india-factory-collapse.html?ref=world>

Nightshift workers at the factory said they heard the building creak before the walls and ceiling crashed down before midnight.

Canada is showing the stress of the 7 of 10 plate movements which are widening the Atlantic and compressing the Pacific, pulling the tip of Mexico to the west and thus pulling the continent from Alaska to the tip of Mexico into a bow. The bow stress is strongest in the center, from coast to coast, but other than land along the Seaway, Canada has seemed to be relatively unscathed. But perhaps we have just been uninformed! Members of the [Pole Shift ning](#) have noticed that significant quakes in the magnitude 5-6 range were being dropped by the USGS in the sparsely populated far north of Canada.

IMAGE: [Dropped Quakes](#)

Per the Zetas, Canada is being stretched from the Yukon to Quebec, causing the land to drop as the many lakes along this stretch zone show, and the stretch is breaking rock!

IMAGE: [Stretch Lakes](#)

ZetaTalk [Comment](#)4/21/2012: *So why would the northern swath of Canada suddenly have these dropped quakes? Note the swath of lakes just under the line drawn by the dropped quakes. From Lake Superior to Lake Winnipeg to the Great Slave Lake to the Great Bear Lake these lakes are there because this land has been pulled apart during prior Pole Shifts. The bowing of the N American continent is a regular feature of prior Pole Shifts. Before the Seaway spreads, this region of lakes is stretched, and drops in elevation. The region where the dropped quakes were recorded is stretched FIRST, and tearing rock recorded as earthquakes.*

In S America, where the 7 of 10 roll is both crunching the continent at the bend point and stretching it on the eastern side, many countries are experiencing record flooding. Rivers are blocked by heaving land, and thus cannot drain. Peru, in the

crunch, reports the worst flooding in 40 years, with some 80,000 people homeless. Paraguay, where the bowing of the continent creates pinched rivers, 40,000 were left homeless.

IMAGE: [S America Pinch](#)

Floods Affect Some 80 000 Inhabitants

April 7, 2012

<http://peru21.pe/2012/04/07/impres/inundaciones-afectan-80-mil-pobladores-2019067>

Overflows from the Amazon River, River Itaya and River Nanay because of the heaviest rainfall in the region that has endured over the past 40 years have left, so far, 80 000 people homeless.

Floods Leave 40 000 Victims in Paraguay

April 17, 2012

<http://www.elsiglodedurango.com.mx/noticia/367291.dejan-40-mil-damnificados-inundaciones-en-paraguay.html>

At least 40 000 people are affected by the floods in the western Chaco region of Paraguay. The rains that fell the last two or three weeks in that area of the South American country overflowed the river Pilcomayo, in regions bordering Argentina and produced flooding in the center of the Chaco, isolating thousands of local women families and livestock.

Internet Restrictions

The Zetas have predicted that despite the elite desperately wanting to maintain the cover-up over the near presence of Planet X, the Internet will not be shut down. This has not stopped some countries from imposing and using gateways to the Internet to keep their public from being informed. As detailed in [Issue 285](#) of this newsletter, Saudi Arabia blocked access to the ZetaTalk site in the year 2000, when their predictions on crop shortages began proving true. They were able to do this because the entire country flows through one Internet gateway, though using a proxy allowed access despite the ban. And in 2012 China blocked access to the Pole Shift ning. This was accomplished by a firewall, built into the China Internet infrastructure from the start, though once again this ban could be bypassed by using a VPN, a proxy. But in the main, sites cannot be readily blocked, as the Internet was designed to flow around obstacles, and it is heavily used by commerce and industry, military and government institutions as well as private individuals.

ZetaTalk [Prediction](#)9/5/2009: *The Internet is not so much hated as feared by the establishment. It has become a tool of*

commerce and business, as well as government functions, and thus cannot simply be shut down without a horrific impact on the economy. This would be akin to martial law, and not be sustainable. Thus, they are stuck with the Internet which disseminates information almost instantly, going viral as the saying goes.

But have things changed? As evidence of Planet X becomes ever more obvious in the Earth wobble, which has the Sun out of place on a daily basis, and the complex visible in the sky by the mere use of an old floppy disc, the establishment is clearly getting nervous! Google's founder has issued a warning to the public. China rather obviously conducted a test of their Internet kill switch, which selectively went after targeted VPNs.

Web Freedom Faces Greatest Threat Ever, Warns Google's Sergey Brin

April 15, 2012

<http://www.guardian.co.uk/technology/2012/apr/15/web-freedom-threat-google-brin>

The 38-year-old billionaire, whose family fled anti-Semitism in the Soviet Union, was widely regarded as having been the driving force behind Google's partial pullout from China in 2010 over concerns about censorship and cyber-attacks. He said five years ago he did not believe China or any country could effectively restrict the internet for long, but now says he has been proven wrong. Governments are realizing the power of this medium to organize people and they are trying to clamp down across the world, not just in places like China and North Korea; we're seeing bills in the United States, in Italy, all across the world.

China's Mysterious Internet Outage; Speculation over a 'Kill Switch'

April 13, 2012

<http://www.zdnet.com/blog/asia/chinas-mysterious-internet-outage-speculation-over-a-8216kill-switch/1636>

At approximately 11am local time [April 12], Internet users around China reported significant Internet blackouts. Not only were they unable to access some Chinese sites, but also many foreign Web sites that had not previously been blocked. The issue was not isolated to China. Web users in Hong Kong and Japan also reported issues with accessing Chinese sites. According to Tech in Asia, VPNs that had previously allowed Internet users to get around the Great Firewall were down, but that smaller VPN providers seemed to be unscathed. This could suggest a deliberate targeting of such services.

Russia laments the very open nature of its Internet, which allows media outlets like RT to pump out the truth without restriction. Now the Wikileaks founder, Julian Assauge, is using the RT network for his new show – The World Tomorrow.

Nervous Kremlin Seeks to Purge Russia's Internet of 'Western' Influences

April 15, 2012

<http://www.rawstory.com/rs/2012/04/15/nervous-kremlin-seeks-to-purge-russias-internet-of-western-influences/>

Unlike other media, the internet in Russia, has developed largely untouched by the arm of the state. It's too late, and too technologically complicated, to institute a China-style firewall.

Assange Interviews Hezbollah Leader

April 18, 2012

<http://nz.news.yahoo.com/a/-/world/13457508/assange-interviews-hezbollah-leader/>

The half-hour segment on Assange's The World Tomorrow show aired on Kremlin-backed broadcaster RT and featured questions about Israel, Lebanon, Syria, theology and encryption. The Australian said that RT had a big audience and his guests had told him things they "could not say on a mainstream TV network."

Per the Zetas, for the present, at least, Assange's new endeavor will succeed, but the wagons are circling. Those who wish to control the Internet, to prevent the public from learning the truth, are not giving up.

ZetaTalk Comment 4/21/2012: *The wagons are circling amid those elements that want the cover-up over Planet X and the alien presence to continue, and those that are comfortable allowing the public to learn the truth. China has a firewall to prevent its public from access to banned websites, a firewall that was constructed at the inception, whereas Russia allowed the Internet to be inserted into its territory without such restrictions. Thus, RT flourishes as the IP of choice among those wanting the news to be frankly and honestly reported. Russia has allowed frank discussion of Planet X signs and signs of the alien presence such as crop circles on its media, even allowing government officials to comment freely. Assange is already in the crosshairs of the big guns in the cover-ups, and is only alive because he is under a protection, as he knows. With a nose for relevant news, and an even better nose for lies and deception, he is hoping to start a trend. In the short term, his campaign will succeed.*
