Issue 260, Sunday September 25, 2011

Weekly news and views from around the world and beyond.

New ZetaTalk

Earth Changes

Announcements

Signs of the Times

Latitude 14° N

Where the southern portions of the Sunda Plate showed sinking early in the 7 of 10 process, always related to rain in the well controlled media, points north were slower to show this effect. The predicted sinking is estimated by the Zetas to put Java 80 feet lower, the tip of Viet Nam 40 feet lower, and the China coastline 20 feet lower. This point has not yet been reached, but the sinking has been reaching into central Thailand, Cambodia, and Viet Nam steadily. We reported on central Thailand early in the process, on November 14, 2010 in [Issue 211](#), because the Sunda Plate was folding, like an accordion, and the valley there sank during this squeeze. An island near Bali suddenly emerged from the depths at that time, due to this accordion folding.

ZetaTalk [Explanation](#) 11/13/2010: *As the tongue is pushed together, the eastern portion pushed toward the west, the valley in central Thailand is buckling, being pushed down.*

But now the flooding in Thailand is so intractable, combined with neighboring countries, that it is clear new sinking has recently occurred. Central Thailand is approximately latitude 14°.

Flood Death Toll Reaches 91

September 16, 2011

<http://pattayatoday.net/news/thailand-news/flood-death-toll-reaches-91/>

Altogether 1,204,358 people in 166 districts of the 30 provinces were affected by the floods.

Where the cover-up has imposed a de rigor explanation that rain is the cause, a report on the ground from Thailand states this is *not* the

case, and rainfall has been light this month.

I live up north in the northern region, Lampang province. But it hasn't been much affected by the sinking of the plate lately. There have been no reports of heavy downpours or severe flooding in the past few months given the climatic turbulence spreading across the whole country. To be honest, we still enjoy living a life here as usual (though other flood-stricken neighboring provinces are extremely in dire state at the moment as the government has been requesting donations in earnest to help alleviate the existing situation)

Neighboring Cambodia is also suddenly flooded in their low lying central district, which drains through Viet Nam rivers which are also in the sinking zone. When the sea backwashes up the rivers, drainage is inhibited, and land that has sunk pools the water, preventing drainage. Where they did have thunderstorms, the sinking in Cambodia is along the same latitude as central Thailand and southern Viet Nam, at latitude 13°.

IMAGE: [Cambodia Flooding](#)

Floods Claim Lives in Cambodia

September 15, 2011

http://english.ntdtv.com/ntdtv_en/news_asia/2011-09-15/floods

Floods swamping parts of Cambodia since last week. The floods, which started in Kompong Thom province, have spread here, and to other areas including Siem Reap, Preah Vihear and Battambang.

Flood Alert Issued, Six Children Drown

September 16, 2011

<http://www.phnompenhpost.com/index.php/2011091651683/>

Water levels on the Mekong and Tonle Sap rivers and Cambodia's giant inland lake had surpassed alert levels. People who are living along the Mekong, Tonle Sap, Bassac and other low lying zones are on high alert for the situation.

Then there is Viet Nam, where the tip is lowland surely destined to sink when the Sunda Plate is pulled down 40 feet, as predicted. Pearl Island (Phu Quoc) at latitude 10° has been almost drowned, with water rising half way up a coconut tree. In northern Viet Nam, Yen Bai at latitude 21° frankly cracked off at the bend line. Split the difference and one has latitude 15°. Something has been happening along latitude 14°!

IMAGE: [Viet Nam Flooding](#)

Raging Floods in the South

August 31, 2011

<http://www.cuuchienbinh.com.vn/PrintPreview.aspx?ID=10011>

Prolonged heavy rain making pearl island, Phu Quoc (Kien Giang) submerged in water. At night 8/28, communal areas where flooding Ocean has about 1.7 m. Near the junction of the communal farm near Ocean water was waist to 4 km along the route. In the town of Duong Dong, Phu Quoc Island at 28 / 8 is where the water was half a coconut tree.

Yen Bai Appeared Lost, Land Subsidence.

September 4, 2011

<http://www.chaobuoisang.net/yen-bai-xuat-hien-sut-lun-dat-615633.htm>

Immediately after checking the situation, that the ground here is quite weak, the ability to continue high landslide mobilized the police force, military people.

Sea Dike Erosion Continues

September 14, 2011

http://tintuc.xalo.vn/002105469534/De_bien_Tay_tiep_tuc_sat_lo.html

There are more than 30 points over the dike erosion, including landslides last 11 points, with three stages of serious landslides.

When can we expect the cover-up over the sinking on the Sunda Plate to break? Per the Zetas, this will likely be in place until the final stages of sinking, when large cities such as Singapore or Jakarta are in serious trouble. Meanwhile, a brutal suppression of the media reigns.

ZetaTalk [Comment](#) 6/11/2011: *Meanwhile, the sinking in Indonesia is deliberately kept out of the press by the governments in the region, who have a brutal hand. Coverage of those regions that have permanently flooded, per our predictions, would have to come from an investigative journalist outside of the region, and they would have to deal with vehement denial from the governments in the region. In that the monsoon season has arrived, this presents at best a confused situation.*

ZetaTalk [Comment](#) 9/17/2011: *It has been 3 months since we were asked about the cover-up in the Asian media, and suppression in the word-wide media as a result. The sinking on the Sunda Plate is not called that, it is rather called flooding due to rain, or erosion of seawalls, or high tides with slow drainage. Certainly any investigative reporting that was begun was quickly snuffed, with death by accident or suicide threatened unless the reporter cooperated. When the sinking on the Sunda Plate completes, there will be cities such as Singapore and Jakarta affected to a degree that it cannot be denied.*

Caribbean Muzzle

What about the S American roll, which has been unfolding slowly but unmistakable, right on schedule, as detailed in [Issue 231](#) of this newsletter on March 6, 2011. Brutality and *bribery* are the time honored methods of controlling the press, and in the easy going Caribbean it seems to be the latter.

Prime Minister Commends China for 1 Billion-Dollar Support to the Region

September 14, 2011

http://news.caribseek.com/Trinidad_and_Tobago/article_99560.shtml

During the Opening Ceremony of the forum in Trinidad and Tobago. Vice Premier Wang Qishan said that in the next three years the Chinese government will execute a number of policy measures to deepen cooperation with Caribbean countries.

Guyana Stands to Benefit

September 14, 2011

http://news.caribseek.com/Guyana/article_99607.shtml

The Asian giant will also help build an early warning monitoring network for earthquakes and tsunamis and provide training for disaster reduction and prevention.

MIF Launches Initiative to Reduce the Impact of Climate Change

September 14, 2011

http://news.caribseek.com/Caribbean/article_99524.shtml

The Multilateral Investment Fund of the IDB Group is investing US\$1.5 million to launch a pioneering initiative that will help coastal communities and micro and small companies in the Caribbean to fight the impacts of climate change.

Why are investment funds being given to a region that is sinking? Per the Zetas, these gifts are an inducement to report the news with the proper spin.

ZetaTalk [Analysis](#) 9/17/2011: *The US is investing a mere \$1.5 million and China can certainly afford to continue its investments in the Caribbean and Guyana with an additional \$1 billion. The relevant issues are the focus of the bequests. The "impacts of climate change" and "early warning" for "earthquakes and tsunami" are specifically mentioned. The forum was held in Trinidad and Tobago, at the heart of the sinking to occur during the S American roll. This is at base an attempt to control the local media, to put the right spin on the anticipated sinking. It will be "earthquake tsunami", not the ZetaTalk predictions, and no mention of the flooding failing to drain. When the failure to drain becomes obvious, then it will be "climate change" with rising seas. Considering what the*

establishment in both countries stands to lose with a premature break in the cover-up, this is indeed considered a good investment!

NASA's Mega Storm

NASA emerged with two articles offering excuses for satellite failure and increasing debris from the tail of Planet X. These articles were *both* dated September 13, 2011, and are indeed related. They are both lies, and both from NASA.

IMAGE: [Crashing Satellite](#)

Dead Satellite Will Fall to Earth By September's End, NASA Says

September 13, 2011

<http://www.space.com/12928-falling-satellite-crash-late-september-nasa.html>

The spacecraft, an old NASA climate probe called the Upper Atmosphere Research Satellite, was decommissioned in 2005 and has been slowly losing altitude since. Soon, the 6 1/2-ton satellite will make a final uncontrolled plunge through Earth's atmosphere.

Mega Space Storm Would Kill Satellites for a Decade

September 13, 2011

<http://www.newscientist.com/article/mg21128294.300-mega>

When the sun belches a massive cloud of charged particles at Earth, it can damage our power grids and fry satellites' electronics. But that's not all. New calculations suggest that a solar megastorm could create a persistent radiation problem in low-Earth orbit, disabling satellites for up to a decade after the storm first hit.

What do the Zetas have to say about this rush to influence the public and explain what NASA anticipates to be yet *another* ZetaTalk prediction come true?

ZetaTalk [Comment](#) 9/17/2011: *What does it mean that NASA emerged with two different excuses for satellite failures and debris from the tail of Planet X, both dated the same day, September 13, 2011. Satellite failure is something we have been warning about since the start of the ZetaTalk saga in 1995. That both these articles emerged on the same date shows that NASA is trying to use media access to foist their lies on the public. The establishment struggles with how to lie most effectively, and likes to get out ahead of the Earth changes we have predicted. Now that their lie about the comet Elenin has been taken from them, they cannot have their pawns blaming Elenin for all the Earth changes anticipated to be unfolding in the near future. What to do? They are returning to blaming the Sun, an old favorite, with a hypothetical "mega space storm" that would kill satellites for a decade! Has such a storm ever occurred? No, but*

as long as NASA has an credentials with the public, they can lie freely and hope to get away with it.

Tatooine Redux

And how does NASA mean to deal with a dramatic appearance of Planet X in the skies, for all to see, the Second Sun phenomena that on occasion presents itself to observers at sunrise or sunset. The Second Sun made dramatic appearances in 2003 when Planet X first arrived in the inner solar system, as the location was just right. Sunlight bounced off the immense dust cloud shrouding Planet X, and came straight to Earth to the viewers eyes. This was presented on April 26, 2009 in [Issue 130](#) of this newsletter, featuring this dramatic photo taken in South Africa on November 2, 2003.

IMAGE: [2003 Photo](#)

Periodically the Second Sun issue is revisited in this newsletter, for instance on May 9, 2010 in [Issue 184](#), when another undeniable sunrise capture was taken.

IMAGE: [2010 Photo](#)

And now again on September 11, 2011 in this newsletter, seen through the haze of a Texas fire.

IMAGE: [Texas Fire Capture](#)

VIDEO: <http://www.youtube.com/watch?v=PaTlkl31uQ>

How will NASA deal with this if it becomes a daily affair, worldwide? Remember *Star Wars*, the dual suns on Tatooine? NASA is trying to project that when Earth has dual suns, this will be sexy, like being in the movies, and "adventure". Somehow this gets NASA off the hook.

IMAGE: [Kepler 16b](#)

Kepler 16b: NASA Discovers 'Star Wars'-Like Planet With Two Suns
September 15, 2011

<http://www.huffingtonpost.com/2011/09/15/kepler-16b-planet-two-suns>

NASA reported on Thursday the discovery of Kepler 16b, a planet with two suns that evokes images of Luke Skywalker's home

planet, Tatooine, from the "Star Wars" franchise. This discovery confirms a new class of planetary systems that could harbor life. The research will be published on Friday in the journal Science. A whole new kind of planetary system has been shown to exist and - like Luke in the story - the adventure is just getting started."

NASA is trying to project that when Earth has dual suns, this will be sexy, like being in the movies, and "adventure". Somehow this gets NASA off the hook, or so they hope. Per the Zetas, they have lied too often, and not just by falling silent. They *actively* lied about the matter, and attacked the one source telling it straight - ZetaTalk.

Nibiru and Doomsday 2012: Questions and Answers
June, 2009

<http://astrobiology.nasa.gov/ask-an-astrobiologist/intro/nibiru-and-doomsday-2012-questions-and-answers>

Then Nancy Lieder, a self-declared psychic who claims she is channeling aliens, wrote on her website Zetatalk that the inhabitants of a fictional planet around the star Zeta Reticuli warned her that the Earth was in danger from Planet X or Nibiru. This catastrophe was initially predicted for May 2003, but when nothing happened the doomsday date was moved forward to December 2012.

It's karma time, guys, and karma is a bitch!

ZetaTalk [Comment 9/24/2011](#): *Imagine the smoke filled rooms at NASA. You've told a colossal lie of omission - failing to tell the public that Planet X exists; that it came into the inner solar system in 2003; that ZetaTalk has been 100% correct on this all along; and that it is parked just sunside and is due to tear up the Earth as it leaves the solar system. You know, just a little omission, but it this a lie? Oh, yes, then there are the many times you have gone public to ridicule the very notion that such a thing exists and to openly ridicule our message, and by name! Now we have more than a lie of omission, we have a bald faced lie.*

Cocky, and arrogant, those at NASA assumed they would be able to slam the door on an angry public ahead of the Last Weeks, and escape to their bunkers. Now that we are only at the 7 of 10 scenarios, just beginning to unfold, and already a looming Venus is showing that things are not right in the inner solar system, they are beginning to tremble. This is taking so long to unfold! What if months go back and the public is certain they, NASA, have lied? What if travel is quite possible and the public is enraged that NASA lied to them? What to do?

They hope the public has short memories, and that their role as the agency that explains the stars to the public, often in grand photos that they and only they can secure via the Hubble, will give them a new role. They can tell the story of Nibiru, make it sexy, wiz-bang

like in the movies such as old favorites like Star Wars, and no one will ask them why they lied to the public for lo these many years! Is this likely to happen? The media has, up until now, been compliant with the cover-up. NASA can always pull the National Security card and say they were ordered to lie. But were they ordered to ridicule the messenger delivering the truth, as Dick Morrison did in his lecture? Lies of omission may be forgiven, but lies of commission are not.

Venus Lingers

Meanwhile, signs in the sky are on the increase! Venus looming, as featured in [Issue 259](#), of this newsletter, is being captured on a number of videos, from many places around the globe. Both in Scotland on September 13, 2011 and in southern California on September 16, 2011 Venus is captured along the line of the Ecliptic at sundown. In Wales on September 14, 2011 it was captured at noon, at 1:00 pm, on the line of the Ecliptic. Venus is certainly looming, perhaps just one of many signs in the skies we can anticipate threatening to break the cover-up over the presence of Planet X in the neighborhood.

IMAGE: [Venus Looming](#)

VIDEO: http://www.youtube.com/watch?v=CI_ALGMJEKM

VIDEO: <http://www.youtube.com/watch?v=dcJHb2Vgi5Y>

VIDEO: <http://www.youtube.com/user/illdivvies47#p/a/u/0/FCR10BN3zOw>

Per the Zetas, we can expect more desperate attempts by NASA and other pawns of the cover-up to explain these signs in the skies.

ZetaTalk [Comment 9/17/2011](#): *Excitement tends to cause talking head to blurt out the facts and panic tends to cause editors to be distracted from their normal review of what is to be broadcast. This will be followed quickly by pre-packaged nonsense excuses, primarily by NASA guests and well rehearsed geologists and oceanologists. We predict a fairly rapid erosion of support for the official explanations, primarily due to a vast and well versed public aware of our predictions and track record. ZetaTalk has been around since 1995, with a consistent message and a phenomenal track record. During any shouting contest when the Earth changes pick up, along with signs in the skies, it will be the ZetaTalk fans who hold the best ammunition and thus they will win, convincing the crowd listening to the contest.*
