Signs of the Times

Plate Movements

There are many clues the plates are moving in accordance with the Zetas 7 of 10 predictions. One can establish where the quakes are occurring, at a glance, by going to the [IRIS site](#). Buoys often show plate movement too, as a [buoy on alert](#) shows a sudden heaping of the water, or movement into a void or depression. On November 13, 2011 quakes outlining the Antarctic Plate show a clear pattern on IRIS. The Antarctic Plate is moving!

IMAGE: [Antarctica Plate](#)

One sign that the Antarctic Plate is moving is a recent huge crack across the Pine Island Glacier there. Per the Zetas, this is due to Antarctica *lifting* as the plate tilts.

Giant Crack Glimpsed in Antarctic Ice Sheet

November 4, 2011

<http://www.rawstory.com/rs/2011/11/04/giant-crack-glimpsed-in-antarctic-ice-sheet/>

A massive crack is growing wider in the Antarctic ice sheet and could break apart in the coming months, forming an iceberg the size of New York City. The crack in western Antarctica's Pine Island Glacier stretches for at least 18 miles (30 kilometers) and runs 165 feet (50 meters) deep.

ZetaTalk [Explanation](#) 11/12/2011: *Why are the ice sheets descending into the oceans on Antarctica melting? Theories abound, but the real reason is one no human scientists would even think of. The ice sheets formerly supported by the sea are losing their support! The*

Antarctic Plate is tilting, and is destined, as we have long predicted, to pop up between the tips of S America and S Africa, creating new land. Recent earthquake patterns along the border of the Antarctic Plate show that the entire plate is on the move. Of course this process also tilts the existing land mass of Antarctica, and as this land mass lies on the portion of the plate destined to rise, the land mass of Antarctica also rises out of the sea. Ice sheets are heavy, and when not supported, they crack off. Simple as that.

On November 8, 2011 a large quake along the border of the Philippine Plate shows movement in that plate, which the Zetas predicted will *tilt* and *fold* as sequence #3 of the 7 of 10 scenarios progresses. This has been in process, but has not yet completed. The quake was exactly along the Philippine Plate border, and by the following day there was another, smaller quake on the opposite side of the plate. *This plate is moving too.*

IMAGE: [Philippine Plate](#)

ZetaTalk [Prediction 2010](#): *The folding of the Pacific plates that accompany the sinking of Indonesia during the 7 of 10 scenarios involves, as we have explained, the Mariana and Philippine plates tilting and flattening westward. The Philippine Plate tilts its eastern side up, dropping its western side down.*

On November 9, 2011 a buoy in the Arabian Sea went on alert, on the plate boundary where the toe of the boot of the Arabian Plate is pulling away, creating a temporary depression in the sea. The tip of the Arabian Plate is lately hitting Turkey, as the plate rolls as predicted by the Zetas and detailed recently in [Issue 266](#) of this newsletter. This plate movement is seen on both the IRIS and the buoy charts.

IMAGE: [Arabian Plate](#)

On November 12-13, 2011 quakes outlining the Caribbean Plate show that the plate as a whole is moving, being pushed down at the juncture near Venezuela, at the islands of Trinidad and Tobago, lifted at the Virgin Islands, and forcefully crushed where Guatemala meets the Cocos Plate. The Caribbean Plate is *moving*, as one,

Never-Ending Flood Problem

October 19, 2011

<http://www.trinidadexpress.com/commentaries/Never-ending>

For more than half-a-century now, every administration has had cogent plans to alleviate flooding in various parts of the country, including the capital city of Port of Spain. None has made a serious dent in the problem anywhere in Trinidad and Tobago. Indeed, in some communities, flooding has worsened, while others which never experienced floods now become inundated after a few hours of steady rain.

ZetaTalk [Prediction 1/15/2011](#): *Islands just to the north of S America will be affected the most such that Barbados to Tobago may sink entirely except for the highest points, losing several hundred feet in elevation, and Trinidad will be torn apart in addition to sinking as it rides on the plate border. A plate, being solid rock in layers, tends to move as one. Thus if the southern part is pushed down, it will tilt, the northern part lift up.*

Pakistan Then and Now

The Zetas warned in September, 2010 that Pakistan, on the India side of the Indus River in particular, would experience a loss of 10 feet in elevation as a result of the 7 of 10 plate movements. Scenario #1 of the 7 of 10 movements is a tilting of the plate holding India, so that the Sunda Plate can slip under the curve below Sumatra and Java.

ZetaTalk [Warning 9/4/2010](#): *The Indus River is one of the points on the Indian sub-continent that is being pushed under the Himalayas range, as a close look at where the mountain building along the northern edge of the Indo-Australian Plate occurs. This would first be noticed on land, especially land subject to being flooded, as such a change under the sea would escape notice unless a tsunami buoy sounded an alarm. What should be watched is how well the flood waters drain, and whether a drop in elevation is noted along the Indus River and its outlet into the Indian Ocean. The Earth changes we have predicted for this region have begun!*

By October, 2010 horrific flooding in Pakistan had begun, getting international attention, but claimed, as usual, only due to rain. As noted in [Issue 217](#) of this newsletter it was finally admitted that the water was not draining, had not for months. Earth Observatory, a NASA function, admitted that by comparing images from the year before, Pakistan's elevation has sunk. Period. The Zetas state this drop would be 10 feet, and this 10 foot drop was apparent. Where are we a year later? Comparing apples to apples, the chart from October 2010 and a new chart from October 2011 show that the lingering floods have *gotten worse*, not better.

Agencies Warn of Acute Pakistan floods Relief Shortfall
November 9, 2011

<http://www.bbc.co.uk/news/world-asia-15643468>

Oxfam, Save the Children, Care and the French agency, Acted, have warned that more than nine million people are at risk of disease and malnutrition. The groups warn they may have to curtail their relief operations unless donors provide more money soon. Less than a third of the UN's relief target of \$357m has been reached. The four aid agencies say that three million Pakistanis still require emergency food assistance and 800,000 remain displaced. Officials in Sindh say that at least four of the province's 22 districts still remain under water. This year's floods in the southern province of Sindh are thought to be worse than last year's deluge and have killed about 250 people.

Zuma's Bunker

The president of S Africa, Joseph Zuma, hit the news recently for building a lavish *underground* bunker in his home town of Nkandla.

IMAGE: [Zuma's Bunker](#)

Bunker Bunker Time: Zuma's Lavish Nkandla Upgrade

November 12, 2011

<http://mg.co.za/article/2011-11-11-bunker-time-for-zuma/>

The additions, including three sets of underground living quarters with about 10 air-conditioned rooms. Other facilities include a clinic for the president and his family, a gymnasium, 20 houses for security guards that are above ground, underground parking, a helicopter pad, playgrounds and a visitors' centre. Zuma and his family would be able to enter the underground bunkers through a 200m-long tunnel running from under the helicopter pad to the main house. Two lifts have been installed for the president and his family. Workers at Zuma's homestead had been instructed to complete the project by November 15, before the president, his wives and children arrive for the Christmas holidays.

Zuma's lavish lifestyle is something of a scandal. He apparently thinks he will be king of S Africa in the Aftertime, planning to keep out the poor natives in his hometown Nkandla with S African troops and a high fence. Typical of elite expectations, the elite put themselves *first* and anticipate continuing loyalty from their guards. Per the Zetas, they are in for a surprise.

Nkandla

<http://plak.co.za/moreinfo.php?id=19167>

Nkandla is a town in the Zululand area of KwaZulu-Natal, South Africa. The Nkandla region encompasses nearly 160,000 inhabitants, spread relatively sparsely over a large area. Poverty is prevalent, with over 90% unemployment. It has the highest rate of HIV infections with statistics stating 1 in 4, but it is closer to 1 in 3. It is the hometown of the current President of South Africa, Jacob Zuma.

ZetaTalk [Prediction 6/7/2005](#): *The wealthy think of nest eggs, stocking supplies to get them through years of enclave living, and bristling with guns on the periphery. What they fail to compute is the psychological games that will go on when their militia realizes their masters have no power to punish them, and the current king of the hill can be toppled.*

ZetaTalk [Prediction 1/10/2004](#): *The result, not surprisingly, is to enclave in those countries or regions where the locals are either in sympathy with the elite or well suppressed and considered a slave class, to move their supplies and militia there under the guise of establishing vacation homes.*

Zuma may also be assuming that S Africa will be the ideal jumping off spot for those wishing to establish a claim on Antarctica and the new land predicted to emerge on the Antarctic Plate between the tips of S America and S Africa. Unfortunately for Zuma, control of S Africa is no more certain than control of either Antarctic or the new land to emerge.

ZetaTalk [Prediction 11/5/2011](#): *We have long mentioned that the country of S Africa will be a target of the elite, for several reasons. It is an ideal jumping off point for those wanting land rights on the new land to emerge near Antarctica and on Antarctica itself. It was long under colonial rule, Apartheid long in its history only recently broken in 1994. Traditions and expectations are not easily erased, so the country would be considered friendly to an invasion by white men with assets. S Africa's infrastructure, on a continent that has only spotty development into an industrial state, is self-sufficient. Thus self-sufficient, it has already taken the first step toward what the elite view as a necessary part of bunker security - technological self-sufficiency. S Africa will be invaded not by drowning immigrants but by the elite with entourage and security guards. All will be demanding service and barking orders at each other, with pecking order battles inevitable.*

Antarctic gives us a glimpse of what it coming for this region. Today, 7 countries lay claim to parts of the Antarctic continent - the UK, France, Norway, Australia, New Zealand, Chile, and Argentina! Land rush ho!

IMAGE: [Antarctica Claims](#)

Puppet Master's Plans

In 2007, the Zetas explained the Puppet Master's plans regarding survival communities. In essence, he wants them strong, stable, and functional. Per the Zetas, regardless of ownership rights over the land, or what might remain from civilization prior to the Pole Shift, he will establish relationships with these communities and come out on top.

ZetaTalk Insight 9/15/2007: *Paper ownership of land will be challenged, if not lost entirely. The Puppet Master will have to negotiate with the new squatters, eventually. He will negotiate with survival communities, offering win-win deals as he has always done, and where diminished will probably die in a position of power similar to that as he hold today.*

ZetaTalk Insight 2/23/2008: *It is what great wealth can accomplish that is the key. As we have often mentioned, the Puppet Master is highly intelligent and no fool. The Puppet Master is first and foremost the head of a large family trust, and is empowered to not only protect these assets but increase them.*

ZetaTalk Insight 9/26/2009: *The Puppet Master knows that strong survival communities will ensure that something will be there after the pole shift, something he can negotiate with.*

How does the Puppet Master plan to facilitate these communities, and perhaps to gain influence even prior to the Pole Shift? Some recent activities of George Soros might give a clue. The Puppet Master, the most powerful man in the world, operates by hidden ownership, the hand behind the hand, etc. Thus is cannot be assumed that Soros himself is making these moves, or holding ownership.

Why is George Soros Selling Gold and Buying Farmland?

August 14, 2011

http://www.naturalnews.com/033319_food_prices_farmland.html#ixzz1bYV0cRh0

Food prices are skyrocketing all across the globe, and there's no end in sight. The United Nations says food inflation is currently at 30% a year. That's probably why investors around the globe are flocking to farmland as the new growth industry.

Being Like Soros in Buying Farmland Reaps Annual Gains of 16%

June 22, 2011

<http://www.bloomberg.com/news/2011-08-10/being-like-soros>

A fund controlled by George Soros, the billionaire hedge-fund manager, owns 23.4 percent of South American farmland venture Adecoagro SA.
